Feedback?

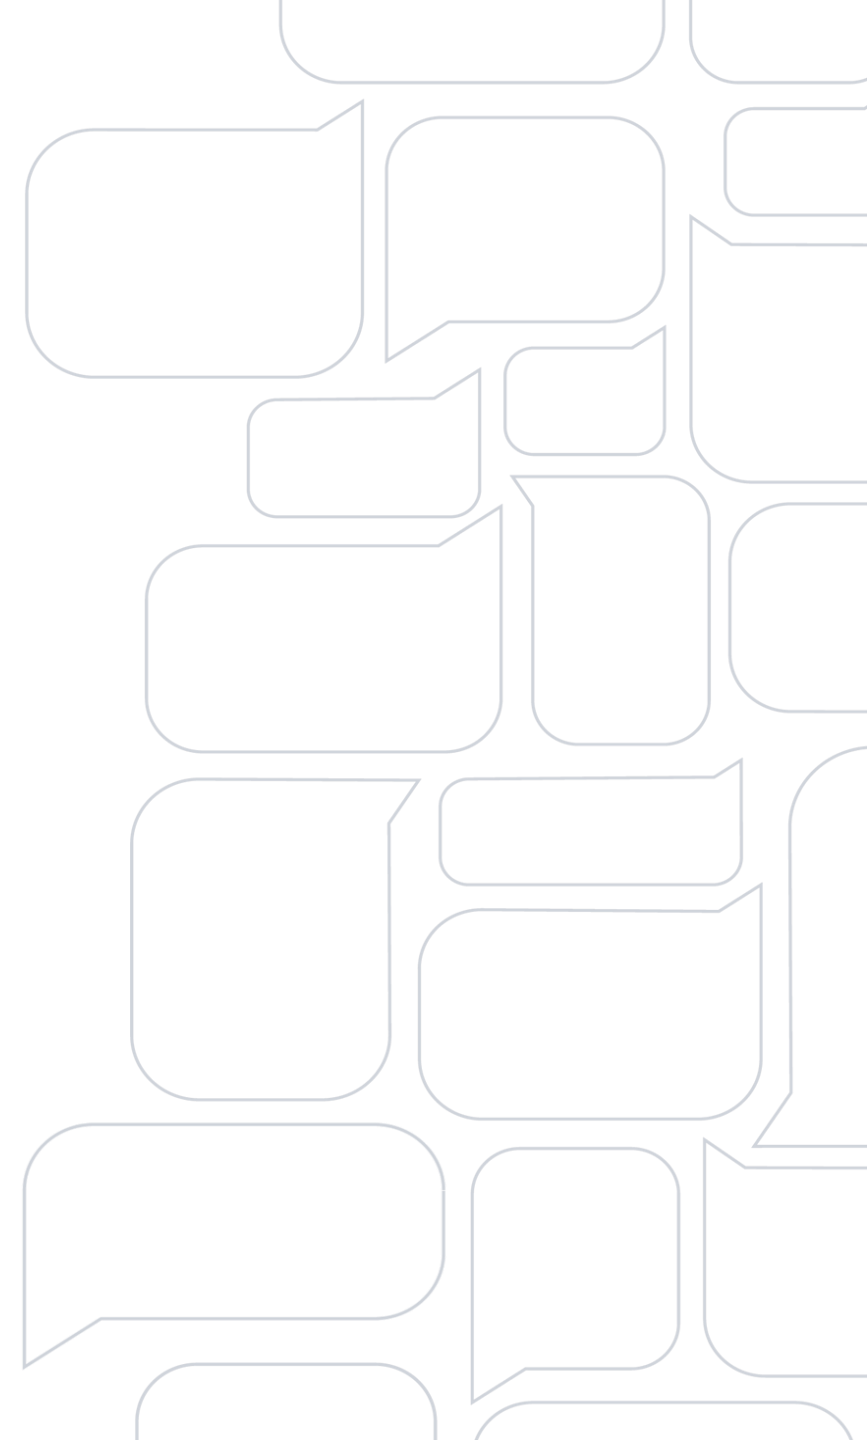

VISION

Discussion

Vision Discussion

- Are you providing vision services at your health center?
- Are health centers billing for Vision services provided by ophthalmologists? Optometrists? Both?
- Is your health center providing retail services to Medicaid beneficiaries? If not, what are the steps to patients getting glasses?
- Do you participate with any additional insurances not listed?
- How are you finding claims processing for vision services?
- What issues is your health center having with either billing or reimbursement?
- For those of you already providing these services, any considerations that would be helpful for those health centers who are moving toward providing vision services?
- Any issues with vision services during cost reconciliation?
